11. All in One WP Security Firewall

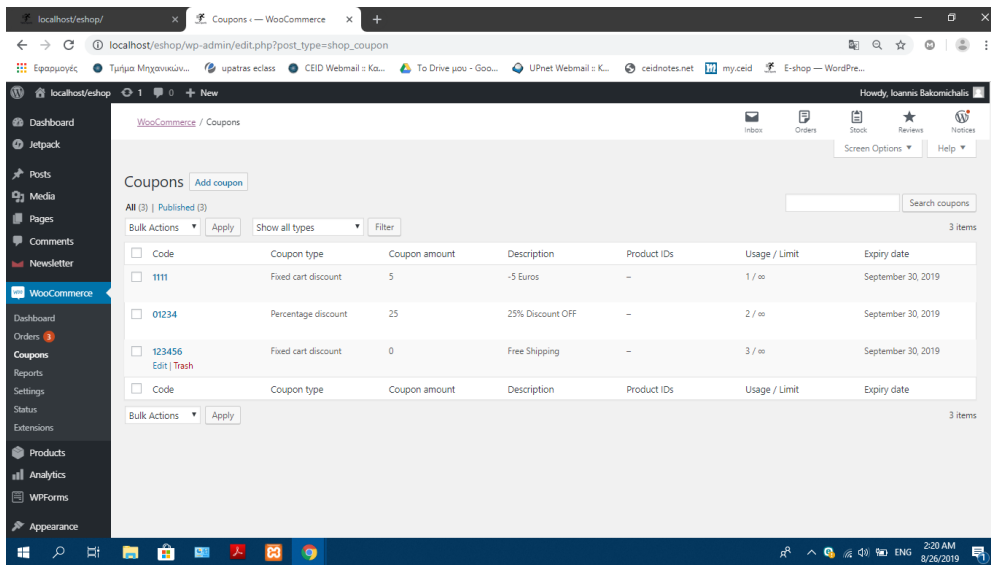

The screenshot shows the WordPress admin dashboard with the 'Plugins' menu selected. A modal window is displayed, providing information about the 'All in One WP Security Firewall' plugin. The modal text includes:

- WordPress itself is a very secure platform. However, it helps to add some extra security and firewall to your site by using a security plugin that enforces a lot of good security practices.
- The All in One WordPress Security plugin will take your website security to a whole new level.
- This plugin is designed and written by experts and is easy to use and understand.
- It reduces security risk by checking for vulnerabilities, and by implementing and enforcing the latest recommended WordPress security practices and techniques.
- All in One WP Security also uses an unprecedented security points grading system to measure how well you are protecting your site based on the security features you have activated.
- Our security and firewall rules are categorized into "basic", "intermediate" and "advanced". This way you can apply the firewall rules progressively without breaking your site's functionality.
- The All in One WordPress Security plugin doesn't slow down your site and it is 100% free.

A blue button at the bottom right of the modal says 'Latest Version Installed'. The background shows the WordPress dashboard with the 'Plugins' menu open, and the 'All in One WP Security Firewall' plugin is listed as installed.
